

APPARATUS FORMED FROM RECYCLED TIRE MATERIALS

ABSTRACT

An apparatus includes an elongated body formed from recycled tire material.

- 5 At least one reinforcing member extends within the body and is disposed between
opposed end portions thereof. Such a reinforcing member is preferably positioned
substantially parallel to a longitudinal axis and may have a substantially V-shape, a
substantially U-shape or a substantially cylindrical shape, for example. The
apparatus further includes a connecting mechanism for removably connecting
10 select ones of the opposed end portions thereof to a support surface or an object,
for example.
